

Figure 11. Nonspecific staining in a variety of cell types. (A) Nonspecific staining of neutrophils (arrows) by Ki67 antibody in a section of mouse lung. (B) Nonspecific staining of mast cells in a section of rat uterus. (C) Section of mouse intestine stained with a bromodeoxyuridine (BrdU) mouse monoclonal antibody. The nuclear staining in the crypt epithelial cells is specific (arrows). However, cytoplasmic staining in the plasma cells (arrowheads) in the lamina propria is nonspecific. (D) A section of the same intestine in
