

Supplementary Figure 7. Effects of PFAS on JEG-3 cell migration during wound healing after 0, 18, 36, and 72 hours of exposure. Each column represents time points of a different PFAS at specific concentration: A) vehicle control, B) 100 μ M GenX, C) 200 μ M PFNA, D) 75 μ M PFOA, E) 175 μ M PFOAA, F) 75 μ M PFOS, G) 175 μ M PFOSA, H) 25 μ M cadmium chloride. JEG-3 cells are masked in teal while regions without cells (the wound) are shown in grey.
