## LEGEND

The ELISpot assay was conducted on the same set of animals as the AFC assay. Data for spleen weight and spleen cell count reported here are also included on the M07 report.

Data are displayed as mean  $\pm$  SEM (N) unless otherwise noted.

Statistical analysis was performed by Jonckheere (trend) and then a pairwise test. Williams/Dunnett pairwise tests are used for organ weights, Shirley/Dunn pairwise tests are used for all other endpoints. The positive control group (50 mg/kg CPS) was excluded from the trend test.

Statistical analysis for the positive control group (50 mg/kg CPS) compared to the vehicle control group was performed using a t-test for organ weights and a Wilcoxon rank sum test for all other endpoints.

Statistical significance for the control group indicates a significant trend test.

Statistical significance for a treatment group indicates a significant pairwise test compared to the vehicle control group.

\* Statistically significant at P  $\leq$  0.05

\*\* Statistically significant at P  $\leq 0.01$ 

 $\mathrm{TDAR} = \mathrm{T-Dependent} \ \mathrm{Antibody} \ \mathrm{Response}; \ \mathrm{SRBC} = \mathrm{Sheep} \ \mathrm{Red} \ \mathrm{Blood} \ \mathrm{Cells}; \ \mathrm{AFC} = \mathrm{Antibody} \ \mathrm{Forming} \ \mathrm{Cells}; \ \mathrm{IgM} = \mathrm{Immunoglobulin} \ \mathrm{M} \ \mathrm{Mod} \ \mathrm{Mod} \ \mathrm{Sheep} \ \mathrm{Red} \ \mathrm{Holds} \ \mathrm{Holds}$ 

 ${\rm SEM}={\rm Standard}$  Error of the Mean

 $\mathrm{SD}=\mathrm{Study}\;\mathrm{Day}$ 

CPS = Cyclophosphamide

Females from the vehicle control and treatment groups were removed on SD 39.
